

Prof. Dr. Florian Künzner

CA 2 – Data representation

The lecture is based on the work and the documents of Prof. Dr. Theodor Tempelmeier

Goal

Computer Science

Goal

- Important basics
- ASCII
- Unicode and UTF
- Data types: Numbers

Important basics

0(1

Which numeral systems do you know?

Computer Science

Important basics

Numeral systems

- DEC: 0, 1, ..., 9;
- BIN: 0, 1;
- HEX: 0, 1, ..., 9, A, B, ..., F; e.g.: 0x128

Conversion between:

- HEX <-> DEC
- BIN <-> HEX
- DEC <-> BIN

Computer Science

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: O. 1:

HEX: 0 1 9 A B F:

e.g.: 291

e.g.: 100100011

e.g.: 0x123

Conversion between:

- HEX <-> DEC
- BIN <-> HEX
- DEC <-> BIN

Computer Science

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: 0, 1;

e.g.: 291

e.g.: 100100011

Computer Science

e.g.: 100100011

e.g.: 291

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: 0, 1;

DIN. 0, 1,

■ HEX: 0, 1, ..., 9, A, B, ..., F; e.g.: 0x123 △

Conversion between:

HEX <-> DEC

BIN <-> HEX

Computer Science

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: 0, 1;

DIN. 0, 1,

e.g.: 291

e.g.: 100100011

■ HEX: 0, 1, ..., 9, A, B, ..., F; e.g.: 0x123

Conversion between:

■ HEX <-> DEC

BIN <-> HEX

Computer Science

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: 0, 1;

DIN. 0, 1,

_ ----- 0, -, -, -, -, -, -, -, -,

e.g.: 291

e.g.: 100100011

■ HEX: 0, 1, ..., 9, A, B, ..., F; e.g.: 0x123

Conversion between:

■ HEX <-> DEC

BIN <-> HEX

Computer Science

e.g.: 100100011

e.g.: 291

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: 0, 1;

DIN. 0, 1,

■ HEX: 0, 1, ..., 9, A, B, ..., F; e.g.: 0x123

Conversion between:

■ HEX <-> DEC

BTN <-> HEX

Computer Science

e.g.: 100100011

e.g.: 291

Important basics

Numeral systems

■ DEC: 0, 1, ..., 9;

■ BIN: 0, 1;

DIN. 0, 1,

■ HEX: 0, 1, ..., 9, A, B, ..., F; e.g.: 0x123

Conversion between:

■ HEX <-> DEC

■ BIN <-> HEX

Important basics - hints

Computer Science

Important basics - short exercise 1/2

Convert HEX: 0xCOFE to BIN.

1,00 100001 nnn 1 nno

Important basics - short exercise 2/2

Convert BIN: 1100 0000 1101 1110 to HEX.

Binary system

Why is the binary (dual) system used in computer science?

Binary system for digits and characters

- lacksquare Technically easy to realise (0/1)
- Well understood theoretical basis
 - Boolean algebra
 - Formal logic

Computer Science

Binary system

Why is the binary (dual) system used in computer science?

Binary system for digits and characters

- \blacksquare Technically easy to realise (0/1)
- Well understood theoretical basis
 - Boolean algebra
 - Formal logic

Computer Science

Subtraction is reduced to addition

Idea: Complementation and addition of the complement

Computer Science

Subtraction is reduced to addition

Idea: Complementation and addition of the complement

```
1 11: -> 01011

2 6: -> 00110

3 complement of 6: 11001

4 + 1

5 -----

6 11010

7 addition of 11 + (-6):

8 11: 01011

9 -6: 11010
```

Computer Science

Subtraction is reduced to addition

Idea: Complementation and addition of the complement

```
1 11: -> 01011
2 6: -> 00110
```

Computer Science

Subtraction is reduced to addition

Idea: Complementation and addition of the complement

```
1 11: -> 01011

2 6: -> 00110

3 complement of 6: 11001

4 + 1

UTF - Unicode Transformation Format

UTF maps all unicode code points to a unique sequence of bytes.

Used for

- Store information into files, databases, ...
- Transfer data (websites, e-mail, ...)

Choice depends on

- Storage space
- Source code compatibility
- Interoperability with other systems
- Runtime for encoding/decoding

UTF-32 encoding details

Unicode range Byte 1 Byte 2 Byte 3 Byte 4

Computer Science

UTF-32 - example

Encode the "—" (U+1F600) into UTF-32!

```
1 Unly the 4 byte variant exists
2 0x1F600
3
4 1 F 6 0 0
5 0001 1111 0110 0000 0000
6
7 In UTF-32:
8 0000000 00000001 11110110 00000000
9 0 0 0 1 F 6 0 0
```

Computer Science

UTF-32 - example

Encode the "—" (U+1F600) into UTF-32!

- only the 4 byte variant exists
- 2 0x1F600

7 In IITF-39

8 00000000 00000001 11110110 00000000

Computer Science

UTF-32 - example

Encode the "(U+1F600) into UTF-32!

- only the 4 byte variant exists
- 2 0x1F600
- 4 1 F 6 0
- 5 0001 1111 0110 0000 0000

Computer Science

UTF-32 - example

Encode the "—" (U+1F600) into UTF-32!

```
1 Only the 4 byte variant exists
```

2 0x1F600

4 1 F 6 0 0

5 0001 1111 0110 0000 0000

7 In UTF-32:

8 0000000 00000001 11110110 00000000

0 0 0 1 F 6 0 0 -> 0x0001F600

Hardware: ALU

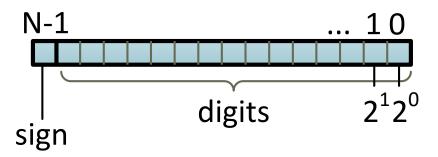

Hardware: FPU Mostly in software

Computer Science

Integer (signed)

Example: short int

Positive number: The weight for position i is 2^i Negative number: The sign is interpreted as -2^N Example short int: Minimum: -32768; Maximum: 32768

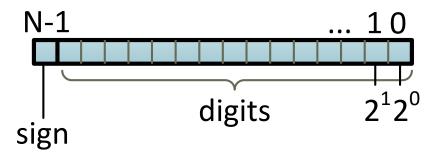

limits: http://www.cplusplus.com/reference/climits

Computer Science

Integer (signed)

Example: short int

Positive number: The weight for position i is 2^{i}

Negative number: The sign is interpreted as -2^N

Example short int: Minimum: -32768; Maximum: 32767

limits: http://www.cplusplus.com/reference/climits

CAMPUS RosenheimComputer Science

Integers

Any problems with integers?

Computer Science

Fixed width integer types (since C99)

Available types:

```
Bits signed unsigned

8 int8_t uint8_t

16 int16_t uint16_t

32 int32_t uint32_t

64 int64_t uint64_t

Example:

1 #include <stdint.h>

2 ...

3 int16_t val 16 = 5;
```

More details: https://en.cppreference.com/w/cpp/types/integer

Computer Science

Floating point – binary

Usually scientific numbers with mantissa and exponent.

Requires hardware support (FPU - floating point unit).

Format: $x = m \cdot B^e$ (m = mantissa, B = basis, and e = exponent)

Examples:

C: float x;

Ada: x: float

CAMPUS Rosenheim Computer Science

Technical University of Applied Sciences

Floating point – binary

Floating point binary formats are defined in the IEEE Standard for Floating-Point Arithmetic (IEEE 754).

		Number		
Name	Common name	of bits	Characteristic	Mantissa
binary16	Half precision	16	5 bits; $c = e + 15$	10 bits
float binary32	Single precision	32	8 bits; $c = e + 127$	23 bits
double binary64	Double precision	64	11 bits; $c = e + 1023$	52 bits
binary128	Quadruple precision	128	15 bits; $c = e + 16383$	112 bits
binary256	Octuple precision	256	19 bits; $c = e + 262143$	236 bits

IEEE 754 on Wikipedia: https://en.wikipedia.org/wiki/IEEE_754

Computer Science

Floating point – binary

Example: float (single precision)

Exponent $-126,\ldots,\pm127$ Exponent is represented via the characteristic

Characteristic c = e + 127

Mantissa $1 \leq m < B$ Is normalised in the binary system

1. MMM... M

Advantage: 1 doesn't have to be saved!

Computer Science

Floating point – binary

Example: float (single precision)

Exponent $-126, \ldots, +127$ Exponent is represented via the characteristic

Characteristic c = e + 127

Mantissa $1 \le m < B$ Is normalised in the binary system:

1.MMM...M

Advantage: 1 doesn't have to be saved!

Fixed point

Fixed point numbers have a fixed imaginary point that is not moved.

Usage:

- Areas where rounding errors must be avoided (e.g. commercial applications)
- If no floating point hardware (FPU) is available (e.g. in embedded systems)
- Devices use the numbers in this format anyway (e.g. analog/digital converter)

Two variants:

Type Usage

Binary fixed point technical

Decimal fixed point economical

Binary fixed point technical

Decimal fixed point economical

Computer Science

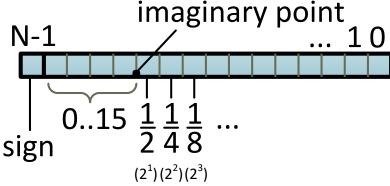

Fixed point – binary

Uses integers with an imaginary binary point.

Often without specialised hardware: Poor man's floating point.

Ada: type analog_input is delta 0.125 range -16.0..15.0;

[C++ library example: Compositional Numeric Library]

Computer Science

Fixed point – decimal

Uses the binary coded decimal (BCD) system with an imaginary decimal point and BCD arithmetic.

Used in IBM main frame. Sometimes there exists specialised hardware.

BCD: Every digit (0-9) is represented by 4 bits

Ada: type money is delta 0.01 digits 8;

imaginary point

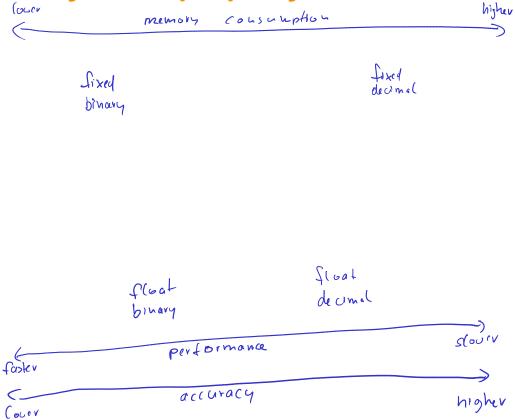

2 digits per byte

[C++ library example: Decimal data type for <math>C++]
